Oakland is becoming a city where bicycling is fully integrated into daily life, providing transportation and recreation that are both safe and convenient. This bike map depicts City of Oakland bikeways plus proposed bikeways that may provide useful connections. However, individuals must determine their own skill levels and physical abilities. Know the rules of the road. Take a bike safety class. Wear a helmet. Respect pedestrians. Be visible at night. Give respect, get respect, and have fun!

**Bikeways**
This map features six types of bikeways, each with specific characteristics:
- **Bike paths** provide a parallel right-of-way that is completely separated from the street. They are typically shared with pedestrians and other mixed-use paths.
- **Separated bike lanes** use parked cars, raised curbs, or other vertical elements to separate bikeways from vehicular traffic.
- **Bike lanes** are striped on streets and designated specifically for bicycle travel. Oakland is adding buffers where feasible to give bicyclists more space between moving traffic and parked cars.
- **Bike boulevards** are roads with reduced street widths through traffic-calming treatments. They include pavement markings, bump-outs, and traffic-calming features.
- **Bike routes** are marked with signs and pavement markings, and may have bikeable shares lanes with driven-vehicle lanes.
- **Proposed bikeways** and bike stands designated for improvements by Oakland’s bike plan may provide useful connections because of lower traffic volumes or wider travel lanes.

**Wayfinding**
This map features the 120+ destinations being supported as Oakland’s bicycle guide signs. These destinations include downtown, shopping centers, schools, commercial districts, parks, landmarks, colleges, hospitals, and high schools. The signs follow the general conventions of freeway guide signs to communicate information in a clear, consistent, and space-efficient format. For more information, see www.oaklandbikeinfo.org.
